

Facilities included in the PFAS Monitoring Plan

The following list identifies those facilities that are preliminarily scoped into the Minnesota Pollution Control Agency (MPCA) PFAS Monitoring Plan. Some facilities that are or will be required to monitor PFAS under a permit or other regulatory requirement are not included in the monitoring plan and therefore are not on this list.

These facilities were chosen based on the best available information about the types of facilities that are generally the most likely to release PFAS to the environment, whether as a direct source of PFAS or a conduit of PFAS from other sources. *The inclusion of a facility on this list does not constitute definitive evidence that the named facility discharges or emits PFAS, or that PFAS is present in the area around the facility.*

The MPCA will be working with these facilities to implement PFAS monitoring. Through that ongoing work, the MPCA may determine that some facilities do not need to monitor or that information or infrastructure is not available to support monitoring at a specific facility. Therefore, it is not expected that all named facilities will complete the initial phase(s) of monitoring laid out in the plan. As MPCA continues to learn about the sources of PFAS to the environment, monitoring may be needed for additional facilities.
